

The Kitchen Reno Electrical Checklist

5 things to decide before your kitchen layout is locked in

Ginger Electrics does the electrical side of kitchen renovations across Wellington and Lower Hutt. A new cooktop, oven or layout can change what your wiring has to carry. Tick off each decision with your builder or designer while the plans can still change.

1 Cooktop & appliances

Know what your wiring can carry

- ☐ Induction cooktop: can your existing wiring carry it?
- ☐ New oven and other appliances checked against the wiring

Tip: Check this at planning, not when the cooktop arrives.

2 Layout & rangehood

What can sit next to what

- ☐ Where the cooktop goes, relative to the windows
- ☐ Rangehood position, and where it vents to
- ☐ Layout reviewed by Shane before it's locked in

Good to know: Renting it out? Under Healthy Homes, a rental kitchen with a cooktop needs a rangehood or fan that vents outside.

3 Power points & lighting

Planned around the new layout

- ☐ Power points moved or added where the benches need them
- ☐ Lighting requirements planned with the layout
- ☐ Existing wiring and lights checked before the new layout

4 Switchboard & wiring

Find out what the old wiring can take

- ☐ Switchboard checked for room for new circuits
- ☐ Any areas that need rewiring identified
- ☐ Wiring checked against current codes and standards

5

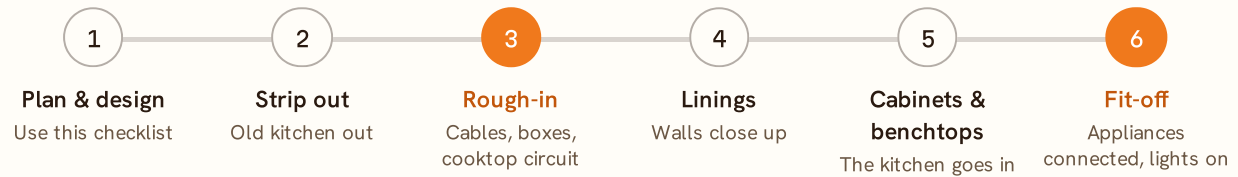

Timing

The earlier, the easier

- ☐ Electrician booked at the design stage
- ☐ Electrical sorted before the walls are lined with GIB

Where the sparky fits into a kitchen job

My kitchen notes

FREE, NO OBLIGATION

Book your free pre-reno electrical walkthrough

Shane will look over your plans, talk through your options and give you a clear picture of what's needed before work starts.

No pressure, just good advice from a local registered electrician.

A planning guide only. All electrical work must be done by a registered electrician to current NZ wiring rules.
